

ValueBar Enterprise Warehouse Management

A stock management solution for medium and large scale multi-warehouse distributed environments.

Overview

Combining the simplicity of Android devices with the familiarity of Microsoft Windows® and embracing a cloud based architecture, ValueBar provides a truly scalable and secure enterprise warehouse management solution.

Intelligently record purchase receipts, manufacturing issues and completions, sales picking and despatch of all physical items in real time.

End to end physical tracking of all batches throughout the supply chain from raw materials to finished items using an innovative batch tracking technique that defines ValueBar.

By Design

Built for tracking, built for throughput.

Cloud capable with integrated mobile Android device interfaces and thin-client, Microsoft Windows® forms. A fully distributed, secure and centrally managed solution.

All interfaces designed to handle large scale data volumes with paging and filtering.

Multi-user at the core, allowing role segregation, task assignment and full accountability.

ERP independent allowing continuity when changing ERP systems.

ValueBar Enterprise Warehouse Management

A stock management solution for medium and large scale multi-warehouse distributed environments.

ValueBar Advantage

Enterprise class design provides peace of mind by ensuring that the software is up to the task when flexibility and scaling are critical factors for success without the need to cobble software on the fly. Regular version updates providing new capabilities while maintaining overall system compatibility.

Key Features

Multi ERP compatible.
Mobile device interfaces.
Cloud capable.
Large scale data handling interfaces.
Multi-user task delegation.
Fast, real time transaction recording.
