

ValueTilities Estate Management

A comprehensive management solution for property estates of any size.

Overview

Combining the simplicity of Android devices with the familiarity of Microsoft Windows® and embracing a cloud based architecture, ValueTilities provides a time saving and secure utilities management solution at an affordable price point for estates of any size.

Water, electricity, sewage, gas and services recording with full financial history tracking and detailed reporting. Quick and easy invoice generation and bulk emailing.

Record additional services per unit on-the-fly with the Android phone interface such as holiday letting services, maintenance and much more.

Fully hosted and supported via the cloud.

By Design

Built for estates, built to save time.

Cloud hosted with integrated Android phone interfaces and thin-client, Microsoft Windows® forms. A fully distributed, secure and centrally managed solution.

Cost effective and interoperable with multiple energy providers, smart meters and estate management solutions.

Full accounting integration support allowing integration to most common accounting packages such as Pastel, SYSPRO, Quickbooks and many more.

ValueTilities Estate Management

A comprehensive management solution for property estates of any size.

ValueTilities Advantage

Simple fully hosted design provides peace of mind.

Utilities readings may be easily recorded using any compatible Android phone with minimum effort and time or automated by using smart meters.

No need for spreadsheets, backups, no lost hard drive data or duplicated information.

Key Features

Multi-accounting package compatible.

Android phone interfaces and smart meters.

Hosted in the cloud.

Simple to use with Excel® style data capture.

Full historical data with trends and graphs.

Bulk emailing of invoices.

- Exception reporting on excess usage with highlighting in colour.
- Early leak detection or excess usage with smart meters.
- Android phone capture shows history and usage to allow for immediate corrections.
- Option to only show outstanding meters to assist in data capture.
- Caters for large estates that have been divided into smaller villages or groups.
- Recurring charges by unit size/type or for certain units (levy, CSOS, extra insurance).
- Role segregation capable, allowing administrative users or data collection users.
- Full auditability - all records tracked to user level and date time stamp including Android phone users.
- When using smart meters, the reading capture is automated and recorded at user defined intervals.
